

# **TYDOM – DRIVE CONTROL APP**

SMART HOME SOLUTIONS FOR SECTIONAL GARAGE DOORS

# WELCOME TO THE CONNECTED HOME

## THE SMART HOME SYSTEM OF DELTA DORE

DELTA DORE develops innovative solutions for controlling building installations. The TYDOM app, for example, can reproduce a complete „Connected Home“ incorporating different functions and scenarios. Alongside components such as shutters, heating systems, cameras and lights, the app can also control sectional garage doors. This is achieved by simply connecting the TYDOM app and a compatible TORMATIC garage door operator using the DELTA DORE set (consisting of gateway and radio module). With numerous optional settings, the app menu can be tailored to an individual user's needs. To turn any home into a real smart home.

FREE APP

The TYDOM app can control several sectional garage doors.

Optimized for tablet and smartphone use.

Free to download from the App Store (iOS) or Google Play (Android).

Personalize the app by uploading your own garage as the wallpaper.

Easy garage door operation and status control – even on the road.

Manage and control whenever you want, from wherever you are.

## THE DELTA DORE SET – EASY TO INSTALL – NO NEED TO ENGAGE A PROFESSIONAL

The DELTA DORE set is necessary if you want to use the TYDOM app to control a sectional garage door. The set consists of two components: the DELTA DORE Gateway TYDOM 1.0 and a plug-in radio module for garage door operation.

The gateway is connected to the router by LAN or by means of a LAN socket. The gateway virtually acts as its own webserver – without a cloud in the background. A fixed IP address enables external access to the gateway (by mobile phone, for example, if WiFi is out of reach). Further DELTA DORE components can be connected, in addition to the radio module for garage door operation.

Further information about the DELTA DORE system is available at: [www.deltadore.de](http://www.deltadore.de)

- Simple “Plug & Play” installation
- No WiFi configuration needed
- Multiple sectional garage doors can be controlled
- Can be extended to include numerous components (light switches, temperature sensors, cameras, etc.)

### THE DELTA DORE SET

DELTA DORE Gateway TYDOM 1.0

Plug-in radio module (UHF, 868 MHz)

THE TYDOM APP IS COMPATIBLE WITH THE FOLLOWING TORMATIC GARAGE DOOR OPERATORS

BLACK 600 / 800 / 1000

**Prerequisite:** When using the TYDOM app or when out of sight of the sectional garage door, an automatic door system must be protected by a light barrier in addition to the standard force limitation system. Use of the TYDOM app to control up-and-over doors has not been approved.
