

PASSION TURNS TO DRIVE

THE NEXT GENERATION OF DOOR OPERATORS

THE BLACK
PANTHER

... is our brand icon
symbolising more than just the
dynamics, power and
aesthetics of our products.
It also stands for the passion of
our employees expressed in
the new TORMATIC slogan,
„Pure Drive“.

THE NEW
TORMATIC

EMBARKING ON A NEW ERA

We are TORMATIC and we are setting out to revolutionise the market with outstanding operators and controls for door and opening systems. Whatever we do, we do it with skill and passion.

No distance is too far for us when it comes to our customers. And no challenge is too big. We are your dedicated contact partner and we put your individual requirements and needs at the forefront of our activities. The consistent focus of our Research and Development Department is on you. Innovation is what drives us. To achieve this we rely on the global resources of the Sanwa Group, the world's market leader for doors and operators. As an independent affiliate of the group we benefit from this international transfer of know-how.

All this enables us to create high-performance products of sophisticated quality, processed at the highest standards with an extremely long service life.

We are TORMATIC. What can we do for you?

Yours sincerely, MICHAEL GLANZ
CEO

THREE GENERATIONS...

...ONE DNA. TORMATIC

1976

The time has come. With the *Tormatic 3000 G/5500 operator* we introduced a track with a C-profile – Initially operated via set pre-programmed radio channels and afterwards by radio-operated remote control featuring channels that can be individually encoded.

1979

DORMA acquires 49 % of the company holdings. Five years later DORMA goes all in and takes over TORMATIC completely.

1985

We relocate entirely to Ennepetal, Germany where we expand our product portfolio with new operators such as the *Tormatic GTA 510/520* and create a completely new design for our products. We conquer the market with additional hit products and new customers.

1988

The *Tormatic GTA 540/550* is introduced as history's first garage door operator with a 24 volt operator unit and control.

1991

Doors now shut very softly using the Soft-Stop automation of the *GTA 540 E*. From 1994 all of our operators are equipped with Soft-Start and Soft-Stop functions.

1997

This operator now comes equipped with a house guard system featuring a status display inside the residence which can show whether the door is open or closed.

2000

TORMATIC becomes an independent corporation headquartered in Dortmund, Germany. Four years later the company form is altered and renamed Novoferm tormatic GmbH, an affiliate of the Novoferm Group.

2013

Since 2013 our company has been dedicated to the *Pure Drive Vision 2020* in line with our company philosophy, Pure Drive. This position stands for functionality, focus and personal customer care in its purest form and gives us an unmistakable identity.

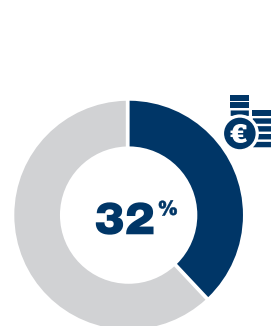

”

WE HAVE BEEN WORKING WITH TORMATIC
FOR YEARS ON A CONSISTENTLY
INCREASING BASIS, NOT LEAST BECAUSE OF
THE EXCELLENT, COLLEGIAL NATURE
OF OUR WORK TOGETHER.

“

SALES GROWTH

in the last 5 years alone, and that's just the beginning.

YEARS

long we have been servicing TORMATIC's oldest customer in Switzerland. Long-term partnerships and satisfied customers are our top priority.

NATIONALITIES

enrich our team because we believe that it is simply easier to draw on a wealth of resources through a cultural mix.

AWAY

to "Down Under" – Australia is the farthest place, where our operators open and close doors.

OUR FIGURES

MORE DRIVE IS NOT POSSIBLE

Along with innovations and great customer satisfaction, we value sustainable growth and stabile business. After all, one doesn't work without the other. Our company has experienced above-average growth for years. We have consistently hired more employees and we have been able to continuously expand our market share. We are also setting new company records in terms of sales, turnover and production. And we have prepared the ground for continued profitable growth with targeted investments in our Research and Development Department and sustained improvement in efficiency.

Circa
380,000

KILOMETERS. THAT'S HOW FAR OUR SALES TEAM TRAVELS AROUND THE WORLD EACH YEAR. THAT'S ALMOST PRECISELY THE DISTANCE BETWEEN THE EARTH AND THE MOON.

77

PEOPLE ARE EMPLOYED BY OUR COMPANY: 27 WOMEN AND 50 MEN.

203

YEARS OF COLLECTIVE EXPERIENCE IS HOUSED IN OUR 14-PERSON SALES TEAM. THIS TRULY REPRESENTS WORLD-CLASS EXPERTISE.

CLOSE PROXIMITY TO CUSTOMERS...

...CREATES THE BEST RELATIONSHIPS

We give everything for our customers, and sometimes even more. The word "impossible" is not in our vocabulary. All of our customers receive precisely the products, which meet their requirements. That's why many of our operators and controls are individually tailored specifically to the customer's needs.

We have been working in accordance with this principle now for more than 45 years. A decisive factor in this is always the enthusiasm, dedication and team spirit of our employees. Innovative processes can only become living visions through them and it is through them that our customers experience the best possible customer service.

WHAT DRIVES OUR ACTIVITIES...

...SPEAKS FOR OUR PRODUCTS

01 QUALITY

Comprehensive quality management is an integral component of our long-term company strategy. Employees from every department research, develop and test new solutions in order to optimise sequences, materials, processes and technologies even further. The result is products that you can rely on for years to come with long-lasting, appealing technology and easy programmability.

02 ENVIRONMENTAL PROTECTION

We don't just think about tomorrow in terms of technology. This is why environmental protection is a crucial component of all our activities integrated into our company targets. Our endeavours to achieve the highest possible product quality and performance also encompass the conservative use of natural resources. In addition, we pro-actively tackle the causes of possible detriments to the environment, promote climate protection and have consistently reduced the energy consumption of our operators.

03 INNOVATION

We know that research and development are indispensable today against the backdrop of growing market demands. We therefore consistently invest in innovations aimed at revolutionising the door operators market with new ideas. We have managed to increase the performance of our operators by an entire 25 %, reduce our steel requirements by 85 % and significantly reduce our energy consumption. But we're not just interested in inner beauty! Our products are attractively shaped, aesthetically appealing and impressive in their sleek elegance.

”
TORMATIC: A STRONG TEAM
THAT WORKS ON MUTUAL OBJECTIVES
WITH GREAT ENTHUSIASM.

“

JONAS DEICKE
[Novoferm tormatic GmbH, Product Manager]

OUR OPERATORS DON'T JUST MOVE DOORS...

...THEY MOVE US, TOO

We always want only the best, and not just for our customers, but also in the development of operator and control technologies. We have taken innovative ideas to develop pioneering technologies and shaped them in attractive designs. We are always determined to meet the very highest in both technical and design demands.

RESIDENTIAL

We continuously conceptualise, improve and develop garage doors ever further, often from scratch. TORMATIC operators combine the latest in technology with contemporary energy and resource efficiency at the very highest level. Their optimised designs, modern energy-saving LED lighting technology, stability and maximum performance are impressive and convincing.

GTA 702 NRG

INDUSTRIAL

Thanks to intelligent control technology our industrial door operators can manage even the most demanding tasks in the uncompromising day-to-day environment of the industrial world with outstanding performance, lasting reliability and great flexibility and efficiency. The spectrum of applications for our operators includes logistics, goods and personal transport, energy management, admission control and building security.
